1. Solve question 2, 4, and 5 in the midsem question paper.
2. Take the dataset that you built for designing a language identification model in the lab assignment 1. Fine-tune a BERT model on this dataset. You can use any BERT model that supports Indian languages such as Indic-BERT, MuRIL, mBERT, mT5, or XLM-RoBERTa. Compare its performance with the models you built earlier such as logistic regression, MLP, LSTM, GRU, and FastText classification models for this task. [Use a base model so that you can either run it on your local machine or Google Colab or Kaggle Notebook]
